

ALUMINUM GROOVED FITTINGS

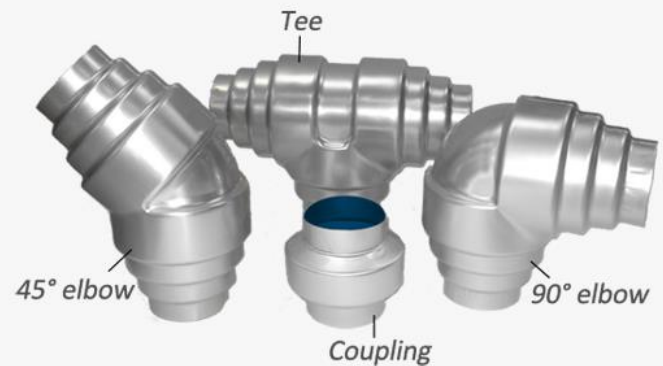

Shur-Fit manufactures the Aluminum Grooved Fittings from **1100 series aluminum**. We proudly source the raw materials in the USA and manufacture them in our Burnaby, BC factory.

They are available in a **.024" thick** aluminum alloy with a smooth finish that conforms to ASTM B209-10 and ASME SB209.

Our two piece fittings feature a factory applied **painted moisture barrier** on the inside and **clear coating** on the exterior. The two piece fittings have a **built in overlap** for a precision fit finish that also makes it easy to seal the joints.

The Aluminum Grooved Fittings, excluding the couplings, are designed with **insulation steps**, allowing you to install 1", 1 ½" and 2" thick insulation for a given iron pipe size.

All of our fittings come in **multiple sizes**, from 2" to 8" iron pipe size.
